Availability Comments:	The site is available within 10-15 years		
Achievability Conclusions:	Achievable		
Achievability Comments:	There is nothing to suggest the site is not achievable.		
OVERALL CONCLUSION:			
<p>The site is allocated for mixed use development and is suitable subject to appropriate mitigation measures as necessary. The site is both available and achievable. Potential contamination issues at the site would need to be investigated and mitigated if necessary. Part of the site is subject to varied levels of surface water flooding and any proposals would need to satisfactorily address this and provide suitable mitigation if necessary. Any future development would need to mitigate against any detrimental impact to the adjacent Local Wildlife Site (SINC) and SSSI, take into account the presence of Public Rights of Way within the site and address any potential impact on the heritage asset within the site. The site lies within an area of former coal mining activity and any development in this defined area needs to demonstrate that the development will be safe and stable, taking full account of the former coal mining activities. Retention of the Headstocks and incorporation into future proposals should be considered by all parties.</p>

The headstocks and a topple zone around it has recently been sold by Welbeck to a private developer. However, the Coal Authority have ownership of the below ground shafts and fan drift area. Welbeck retain the rest of the site and the headstocks will be retained and reused. Negotiations with the landowner suggest that continued allocation as a mixed use site will maximise viability.
